Objective

Product-minded Technology Information Management and Cognitive Science student seeking a product or program management internship. I bring hands-on experience across the product lifecycle: interviewing users to uncover workflow pain points, turning them into PRDs and success metrics, planning and coordinating designers and engineers through launch, and building AI agents that automate manual work. I want to help a team ship products that make complex work simpler for the people who use them.

Education

University of California, Santa Cruz

Santa Cruz, CA

B.S. Technology Information Management & B.S. Cognitive Science

Expected March 2028

- **Relevant Coursework:** Business Information Systems, Statistics, Python Programming (CSE 20, CSE 30), Linear Algebra
- **Leadership:** Alpha Kappa Psi (professional business fraternity)

Professional Experience

Product Manager Intern

Santa Cruz, CA

Google Developer Groups on Campus

April 2026 – Present

- Increased member engagement **40%** and cut information-lookup time 60% for a 100+ member organization by running user research, defining 15+ requirements and success metrics in a PRD, and driving a centralized website through the full SDLC, from wireframes to engineering handoff and launch
- Achieved 100% budget accountability across concurrent events by building a centralized tracking workflow in Google Sheets and aligning event leads on spend and timelines

Product Research Intern

Santa Cruz, CA

Tech4Good

March 2026 – Present

- Improved user retention **18%** and shortened iteration cycles 30% by interviewing 50+ users across 3 client sites, process-mapping their workflows to surface 10+ friction points, and converting findings into testable Figma prototypes
- Streamlined design-to-engineering handoff for 8 designers and engineers by building a standardized documentation system for specs and interaction patterns, adopted as the team's default workflow

AI/ML Instructor Assistant

Oakland, CA

Kode With Klossy

March 2026 – Present

- Raised comprehension of LLM workflows and model pipelines across **20+ students** by designing tiered explanations and analyzing student performance data in Python (Pandas) to drive curriculum improvements

Treasurer

Santa Cruz, CA

Society of Asian Scientists and Engineers (SASE)

October 2025 – Present

- Closed the chapter's funding gap and maintained full accountability on an **\$8–10K** annual budget by building an itemized tracking system and coordinating program timelines and spend across officers and events

Projects

Splitcart — AI Receipt Parser (1st Place)

github.com/saraxjain/splitcart

Gallo Campus Hackathon 2026, 24-hour build

May 2026

- Won **1st place** by automating a manual, error-prone task (splitting shared expenses) with a Python + Claude API pipeline that extracts line items from receipt images; benchmarked model accuracy against API cost to choose the production model and shipped a Flask demo in 24 hours

Pathwise — Autonomous Financial Planning Agent

github.com/saraxjain/pathwise

Hack-a-Claw 2026, NVIDIA hackathon at UCSC (team of 3)

May 2026

- Shipped a working AI agent in 24 hours that turns plain-English financial profiles into month-by-month plans, by orchestrating multi-step Claude reasoning, persistent memory, and live market data (Tavily API)
- Built a Flask + Chart.js dashboard for debt-payoff and net-worth scenarios, and evaluated output accuracy against inference cost to guide model selection

Skills

- **Programming & Data:** Python (Pandas), SQL, JavaScript, REST APIs, Excel, Google Workspace, Git, Flask
- **AI Agents & Automation:** Claude API, GPT-4o, Gemini, LLM agents, workflow automation, model evaluation (accuracy vs. cost)
- **Product & Program Management:** SDLC, PRDs, user flows, project planning & scheduling, user research, process mapping, success metrics, A/B testing, dashboards, Figma
